

# Save-A-Tron 5000 and

WINTER 2024

PUBLISHED QUARTERLY FOR THE  
SAVEABLES KIDS CLUB AT TFCU

## Spring forward!

Daylight Savings Time is coming up March 10, but what does this mean for you? Well, it means you will set your clocks forward one hour at 2 a.m., but it also means you will get more sunlight in the evening and less in the morning. All of the United States will change their clocks, except Arizona, Hawaii, Puerto Rico, the U.S. Virgin Islands and American Samoa.

In the fall, on November 3, we will move the clocks back one hour.

A great way to remember which way to move the clock is with the saying "spring forward" and "fall back." You move the clock forward in the spring and backward in the fall. 😊

## Get in on Give Back for Kids!

Being a member of the SaveAbles Kids Club is an easy, fun way to save money and get cool, free stuff. And, some lucky SaveAbles members can get even more through Give Back for Kids!

Every month, five kids with a SaveAbles account will have one deposit matched, up to \$100. Who knew multiplication would be so much fun? Since we started Give Back for Kids in 2010, we've matched over 790 member deposits, totaling over \$41,000.

It is all part of our member Give Back at TFCU! This is one way we get to say "thanks for being a member." Make a deposit for your chance to win today! 😊

Get excited  
about saving!

## We have an extra day in February

Ever think it would be nice to have an extra day to spend with family or play with friends? Or maybe even catch up on homework? Well, you're in luck, because 2024 has just that. Most years, February only has 28 days, but every four years, this year is one of those years, is called a leap year. February 2024 has 29 days.

And why is this? The calendar is supposed to match the solar year, in other words, the length of time it takes for Earth to orbit the sun once. But, this doesn't add up to exactly one year, or 365 days. It actually takes Earth 365 days, five hours, 48 minutes and 46 seconds to complete its orbit (about 365 1/4 days). Those extra hours add up and, after four years, the calendar is off by about one day. Adding a day every four years allows the calendar to match up to the solar year again.

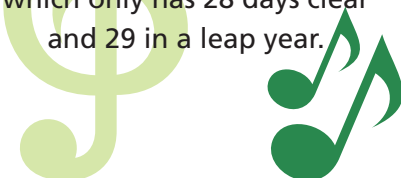

Those five hours, 48 minutes and 46 seconds don't sound like a lot, but if we didn't adjust for this day every four years, eventually our seasons wouldn't fall in the same months every year. For instance, school might eventually start in the spring instead of late summer. And farmers would have a difficult time growing crops, which could affect food supplies.

So, on February 29, go out and do something fun to celebrate the extra day! 😊

### Sing-a-long!

Thirty days has September,  
April, June and November.

All the rest have 31,  
Except for February, it's the one,  
which only has 28 days clear  
and 29 in a leap year.
